DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 13, 14, 16-24, and 34-40 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Applicant claimed pilot sequences in claims 18-24; and data structures in claims 13, 14, 16, 17, and 34-40. However, a pilot sequence or a frame structure alone is merely the arrangement of data. The claims should have been amended to indicate the hand of inventor, e.g. by using the pilot sequences in a communication system or process for double-checking of frame synchronization timing and reduction of the synchronization search time as set forth in the specification at page 32-35.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No.

5,680,414 to Durrant et al.. Durrant et al. disclose a system generates control signal with

A first sequence of L-bit C_{odd} and a second sequence of L-bit C_{even} (Fig. 10, 11C, and 11D; col. 15, lines 45-47);

Art Unit: 2663

Auto-correlating the first and the second sequence by using the correlators 722, and 723 (Fig. 10);

Cross-correlating the first and the second sequence by using the correlators 724, and 723 (Fig. 10);

And combines the results by using the summer 710 (Fig.10).

Since Durrant et al. disclose the a synchronization apparatus for a wireless communication system and it is well-known in the art that a communication channel comprises data signal and inserted pilot bits for synchronization, it is inherent that the system described by Durrant et al. generates control signal and data signal within a communication channel.

Allowable Subject Matter

4. Claims 2-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 15, and 26-33 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nhat Do whose telephone number is (703) 305-5743. The examiner can normally be reached on 8:30 AM - 5:30 PM Monday - Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau Nguyen can be reached on (703) 308-5340. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-6743 for regular communications and 703-308-6743 for After Final communications.
